power steering pump pulley  
Before Beginning the Job  
Place vehicle on level ground and adjust the gear selector to park (standard transmission in gear)  
Allow engine to cool  
Apply parking brake  
Open hood  
Disconnect battery  
Step 1 - When replacing a power steering pump the main drive pulley MUST be removed and reinstalled onto the new replacement pump.. If debris is present use a small piece of sandpaper to smooth out the surface before installation.. Gently spinning the pulley will ensure a 'square mount' which will start the correct alignment before the installing.. SPONSORED LINKS  
Step 5 - Once the desired temperature has been achieved gently align the pulley onto the shaft. [Download Virtual Dj 5 For Mac](#)

Helpful Information  
SPONSORED LINKS  
Once the pulley is flush with the input shaft the installation is complete.. This connection allows the engine to transfer its power through the serpentine belt which is fitted over the power steering pump pulley.. Continue this action until the pulley becomes free of the pump input shaft  
Once repairs have been made and the pulley needs to be re-installed' it's best to first warm the pulley to about 120 degrees F.. Step 4 - Make sure the shaft the pulley will be installed on is clean from rust and nicks, this will make the installation processes more difficult.. Anything but a clean surface can cause the pulley to slip which would create a failure. e828bfe731 [18 Wheels Of Steel download free](#)
